

Sustainability Framework

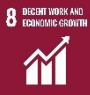

Our Company Purpose

To support profitable and environmentally and socially responsible infrastructure projects.

Challenges

2025 Goals

UN SDG's

Manaakitanga Our People	 Our People	<p>The New Zealand construction industry has lost its 'balance' resulting in high rates of mental illness, unhealthy lifestyles, a lack of diversity and a workforce that contributes greatly to climate change.</p>	<p>We will have policy in place that empowers our people to reduce their carbon footprint and creates synergy with looking after their health and wellbeing.</p>	 
	 Communities	<p>Communities in the regions that we operate are developing at increasingly uneven rates, with some struggling to maintain cohesion, resilience, and prosperity</p>	<p>Procure 50% of our expenses from within the Canterbury Region. Over 50% of our carbon and forest regeneration projects are within the Canterbury region. Ensure that we consider the local community in our projects and ensure that we advise our clients in ways that they can make their projects more sustainable.</p>	  
Kaitiakitanga Our Place	 Carbon	<p>The world must hold the increase in the global average temperature to well below 2°C above pre-industrial levels by peaking global greenhouse gas emissions as soon as possible or face a potentially irreversible threat to human societies and the planet.</p>	<p>From inception KCC will be a carbon zero company. Our goal is to be a leader in the construction industry and be carbon zero by 2025. We will do this by reducing our carbon footprint year on year while also decreasing our third-party offsets and developing our carbon sinks for emissions we cannot eliminate.</p>	  
	 Nature & Science	<p>Due to construction, rates of resource use and ecosystem degradation in New Zealand are increasing, and negatively impacting New Zealand's ability to sustain its economic and societal wellbeing.</p>	<p>We aim to plant and maintain a hectare of indigenous trees per employee every five years. This will not only remove carbon from the atmosphere but will also create habitat for native species. We also will aspire to be a zero-waste business and will reduce our waste to landfill by 90% by volume.</p>	  

Sustainable Development Goals: The United Nations Sustainable Development Goals (SDGs) are a framework for business and government to solve global economic, social, and environmental challenges.
